Re: application no 10/623,260

Dear Mr. Swinehart,

Thank you for your directions on the phone.

Response to: DETAILED ACTION

I have completely reworked the drawings using AutoCad adhering to the old hand drawings with no new matter shown except as directed. I hope this clears items 1, 2, 3, 4 and 5.

It is the goal of this invention to provide a non-intrusive device that people will want to wear when working and playing in or around water. The compressed cartridges used in the ends can be as small as 9mm as used medically and by magicians to shoot confetti or handkerchiefs. Whenever I fly, I only think of the chaos of present solutions to a ditch at sea. My invention has two stand alone air cell systems. The wearer or a near person is easily able to deploy the device by pulling or yanking anyplace around the ring.

Neither Horton nor France provides for a redundant system should there be an air bag puncture or gas device failure although France does have a dual gas canister. For deployment both devices require the user to be able to locate and press the trigger.

I will try to respond to on time to further communications. Working on the road on aerospace projects is pretty tough sometimes. The last two months has been even tougher because of a heart problem that made it necessary for a heart catheter at George Washington University Hospital on June the 18th.

Best regards,

Lanny Lee
